

SANDSTONE NEW DESERT SAND

Smooth Random Ashlar Blocks

Born out of the rolling dunes in the desert, this sandstone, with its sandy shades and brown creased veining has a sunny disposition. This versatile stone works well in either traditional or contemporary designs.

Natural stone blocks are nominally between 95-110mm thick and typically used like a brick as a construction element.

Please note minimum quantities and extended lead times may apply, contact us for more information.
