

## **SANDSTONE SAND DUNE**

### **Rock Face Random Ashlar Blocks**

Natural sandstone is part of South Australia's rich heritage used in the earliest colonial buildings. Referencing those buildings, this high quality, fine grain sandstone will stand the test of time. Its subtle sandy/salmon colour with the slightest brown veining offers warmth and beauty. The scalloped nature of this rock face cast shade on the underside of each block, dramatising the depth of this natural stone's texture.

### **GALLERY IMAGES**

Natural stone blocks are nominally between 95-110mm thick and typically used like a brick as a construction element.
