

SANDSTONE DARK GREY

Split Face Random Ashlar Blocks

As much as we love our 'sandy' sandstones, sometimes modern design calls for something a little greyer. We have searched the world's quarries and found this unique sandstone that offers solid dark grey colouring, with minimal colour variation.

Natural stone blocks are nominally between 95-110mm thick so can be used like a brick as a construction element.

Please note limited quantities are available, contact us for more information.
